April 2016

NEW PRODUCT

DESCRIPTION

Release of Rear Bar and accessories for Toyota HiLux 2015 to suit Kaymar Reversing Sensor Kit Option

TO SUIT VEHICLE

Toyota HiLux 2015 4WD SR5

PRODUCT No.

KitHil-15

Barcode 9344284012504

Refer to the end of this release for kits and options part numbers

AVAILABILITY

From late April, 2016

OVERVIEW

Toyota HiLux 2015 continues on with the tried and true crew cab ute format which is so popular with offroaders and tradies. As so many have found, replacement of the factory bumper with a steel bar and carrier setup greatly enhances practicality of this vehicle family.

Fitted with two heavy duty pivots to accommodate a mixture of carriers in configurations of either two spare wheels or a spare wheel and two jerry cans the bar also includes an integral towbar rated to meet the vehicle's 3,500/350 Kg tow/ball weight rating.

All steel bar construction substantially upgrades rear end protection of the ute tub while enhancing the overall look.

Carriers lock to the bar with

Kaymar's tough over centre locking system using time proven anti-rattle innovations and heavy duty vertical support rests. Handles are rubber dipped for non-slip grip.

As the Hilux comes to market all models are without a factory installed reversing sensor capability these rear bars are supplied with knockouts for the Kaymar reversing sensor solution which accommodates 4 sensors evenly spaced across the bar width and links through to a cab installed buzzer and isolation switch for when towing.

Sensor Kit Components and Installation

The Kaymar sensor kit includes:

- 4 sensors
- Controller unit
- Buzzer

- On/Off switch
- Cabling

All bars are smoothly finished before being zinc plated and finally powder coated satin black for a premium final look. If desired a colour coded finish is available to match the vehicle.

The relocation of the factory camera is on to a bracket on the LHS carrier only. So if fitting a bar with one carrier option this must be the LHS carrier.

KAYMAR SENSOR KIT FEATURES and SPECIFICATIONS

Sensor heads have 160° horizontal and 70° vertical detection zones. Multiply this by 4 and the coverage is the best in the world. The ability to detect a 30mm pole is the industry standard.

Colour coding is available to match most vehicle body colours.

When reverse gear is engaged the system will emit a one second audible tone after completing a self-diagnostic check. If an object is detected a sequence of beeps via a hidden audible speaker will get faster until a continuous tone is heard indicating the vehicle is now within 30cm of the obstacle.

A factory style 'mute' switch is also installed for use when towin

Component Features

- Metal ECU control box
- Adjustable range and sensitivity
- Adjustable volume control and mute function
- Self diagnostic check on startup
